## **Agreement Opens International Channels for Bio-Oxidation Technology**

Bio•Reaction Industries, LLC Announces a Licensing/Manufacturing Agreement  
with EverStar Corporation of Taipei, Taiwan

**June 15, 2006** (Portland, OR) - Bio•Reaction Industries recently signed a manufacturing and distribution partnership with EverStar Corporation of Taipei, Taiwan. The partnership opens international channels for the design and implementation of industry-leading bio-oxidation technology in underserved markets. Specifically, markets seeking more sustainable technology.

Asian markets are seeking a bio-oxidation technology to lower operating and maintenance costs due to the rising expenses of fossil-fuel based destruction systems.

“We are seeing an increased demand for biological solutions for pollution control. While there is a growing need for pollution control throughout Asia, it is becoming less cost effective to use thermal oxidizers. We investigated the market and Bio•Reaction’s technology has the highest VOC destruction

efficiencies and they have a willingness to work with us in our market as well as other markets in Asia,” Abe Wang, President of EverStar, said. “Bio●Reaction provides a previously unavailable technology, allowing us to broaden our product offerings.”

Karl Mundorff, President of Bio●Reaction Industries said, “Bio●Reaction has an interest in growing our business overseas and EverStar is going to be a great partner. They can sell our products in their markets along with providing us with manufacturing for other markets such as Japan and mainland China, including projects developing in Beijing and Shanghai.

Abe’s aggressive attitude and knowledge of his markets has already provided us with full-scale system opportunities we are in the process of converting. We are excited about this relationship and look forward to developing it over the next few years”.

**Editor’s Note:**

Bio●Reaction Industries designs, builds, and installs bio-oxidation systems. Based in Portland, Oregon, Bio●Reaction’s technology uses microbes to digest industrial and municipal odors and pollutants which eliminates the creation of NOx SOx and CO (greenhouse gas precursors). These advanced bio-oxidation systems provide the highest removal efficiency of any air phase biofilter technology in the world. Visit [www.bioreaction.com](http://www.bioreaction.com) for more information.

Based in Taipei, Taiwan, EverStar designs and builds thermal oxidation systems for the control of odors and volatile organic compounds from industrial applications with a focus on the high-tech industry in Taiwan, Hong Kong, and Southern China.
