Bio•Reaction Industries Announces New Contract

Bio•Reaction Industries, LLC Announces Wood Products Contract

December 1, 2006 (Portland, OR) - Bio•Reaction Industries signed a contract with a major wood products manufacturer to provide its patented Bio-oxidation system to control the press emissions from a Greenfield OSB plant in lower Alabama.

Karl Mundorff, President and CEO of Bio•Reaction Industries said, "We appreciate the opportunity to work with our customer on this large scale project. Our Bio-oxidation technology allows us to harness nature to control industrial air odors and pollutants. Our patented biological process has secondary emissions of only respiratory levels of CO₂, a little bit of heat and a little moisture. We believe this provides a better solution for our customers and the environment".

Editor's Note:

Bio•Reaction Industries designs, builds and installs bio-oxidation systems. Based in Portland, Oregon, Bio•Reaction's technology uses microbes to digest industrial and municipal odors and pollutants. This eliminates the creation of NO_x, SO_x and CO (greenhouse gas precursors) produced by alternative pollution control solutions. These advanced bio-oxidation systems provide the highest removal efficiency of any air phase biofilter technology in the world. Visit www.bioreaction.com for more information.
