Bio_Reaction Industries, LLC Announces New Licensing Agreement

December 17, 2007 (Portland, OR) – Bio_Reaction Industries has signed a licensing agreement with Lenzing Teknik of Lenzing, Austria.

Lenzing Teknik is one of the largest engineering and contracting companies in Austria and active as an international supplier of equipment and technology for the fiber, pulp & paper, filtration, automation and mechatronix industries. Lenzing Technik has created an environmental division adding Bio_Reaction's patented bio-oxidation technology as a cornerstone of its environmental product offering.

"We are excited to join together with Lenzing to supply our low energy use, greenhouse gas friendly technology as an alternative to thermal oxidation throughout the European Union. Lenzing is innovative and thorough in its approach to the marketplace and we could not be aligned with a better partner", Karl Mundorff, President and CEO of Bio_Reaction Industries said. "Their understanding of the global issues industry is facing in managing growth without contributing to global warming was a significant reason we have been able to come together on this agreement".

The Lenzing Group is very active in the field of environmental technology for almost 30 years. Lenzing Technik (a 100% subsidiary of Lenzing AG) first worked exclusively for the Lenzing Group in its international investments and started activities outside of the Group in the early 1990s.

Along with providing turnkey solutions for its customers, Lenzing Technik installs its own environmental technology along with licensing partners technology globally.

Hans Weber, CEO of Lenzing Technik said, “With the BRI system, we found the missing link in our environmental product portfolio. The experience and innovative behavior of the BRI Team will enrich our activities. We are very pleased that this agreement materialized.”

###

Editor’s Note:

Bio_Reaction Industries, LLC designs, builds and installs bio-oxidation systems. Based in Tualatin, Oregon, Bio_Reaction’s technology uses microbes to digest industrial pollutants and odors which eliminate the creation of NOx, SOx and CO (greenhouse gas precursors) from the combustion process of thermal oxidizers. These advanced bio-oxidation systems provide the highest removal efficiency of any air phase biofilter technology in the world. Visit www.bioreaction.com for more information.

Lenzing Technik, GmbH is a member of the Lenzing Group. It globally manages projects, delivers equipment and provides services for the fiber, pulp, filtration and environmental industries as well as in plant engineering, automation and mechatronics. The company has about 580 staff members and generates annual sales of more than EUR 100 million. Visit www.lenzing-technik.com for more information.
